Education

Rensselaer Polytechnic Institute Troy, NY

Bachelor of Science in Computer Science *August 2024 – May 2028*

- **Relevant Courses**: Network Programming, Cryptography & Network Security, Computer Architecture, Operating Systems, Distributed Computing, Parallel Programming, Database Systems, Data Structures, Algorithms

Experience

System Administrator August 2026 – Present

Rensselaer Polytechnic Institute *Troy, NY*

- Administer 10+ Linux & Windows servers hosting services for the Union, Student Government, and 20+ clubs
- Containerize and deploy applications with Docker behind NGINX reverse proxies, standardizing configurations so deployments are repeatable across servers
- Maintain 99% availability for internal services, diagnosing and resolving WordPress, CMS, and networking issues
- Manage cPanel/WHM hosting for student organizations end to end: account provisioning, DNS record management, and SSL/TLS certificate issuance and renewal
- Operate MySQL & PostgreSQL databases, handling backups, access permissions, and troubleshooting, with configuration changes tracked using Git and GitLab

Data Engineering Intern September 2025 – December 2025

Beyond AI *Mobile, AL*

- Automated CRM synchronization with Python scripts, eliminating around 8 hours of manual processing per week
- Migrated Microsoft Excel workflows to a Supabase (PostgreSQL) database, cutting lookup time from roughly 10 minutes to under 1 minute
- Built Python validation scripts that automatically checked 30,000+ records, reducing data entry errors by 35%
- Designed database structures to track 500+ leads, giving stakeholders real-time visibility into the sales pipeline

Programming Instructor February 2024 – August 2024

Code Ninjas *Parsippany, NJ*

- Taught Python to 20+ students of all skill levels in 5+ monthly lessons; adaptive lesson plans raised retention 25%
- Mentored students in creating 10+ Microsoft MakeCode games, teaching debugging techniques in real time

Projects

Automated Personal Finance Tracker | *Python, SQLite, Plaid API, Anthropic API* July 2026 – Present

- Built an automated ETL pipeline that pulls bank transactions through the Plaid API, normalizes them, and loads them into SQLite
- Integrated the Anthropic API to auto-categorize transactions, with spending trends in a Streamlit dashboard

Automated Job Application Tracker | *Python, SQLite, Gmail API, Anthropic API* July 2026 – Present

- Built a Python pipeline that ingests application emails through the Gmail API, extracts structured fields with the Anthropic API, and stores them in a SQLite database
- Designed an event-based schema that records every status change, visualized in a Streamlit dashboard

Skills

Languages & Databases: Python, C/C++, Bash/Shell Scripting, SQL, PostgreSQL, MySQL, SQLite, Supabase

Infrastructure & DevOps: Linux & Windows Server Administration, Docker, NGINX, cPanel/WHM, Amazon Web Services (EC2), Microsoft Azure, Git, GitHub, GitLab

Networking & Tools: DNS, HTTP/HTTPS, SSL/TLS, SSH, TCP/IP, Wireshark, GDB/LLDB, Streamlit
